## Qubies

Qubies are a wonderful little invention for freezing portions of baby food quickly, easily and without mess. Rather than fiddle around with regular icecube trays, you just pour the food into one long tray and the flexible lid has portion dividers that will create separate cubes for you. The portions are 30mls each, so they're larger than icecubes, and it's a very easy product to use. I have two of them and don't know how I'd manage without them!
